

Medium Temp Insulated Sliding Door

BPIR Declaration

Version: v1

Designated building product: Class 2

Declaration

AceDoor Systems 2013 Limited has provided this declaration to satisfy the provisions of Schedule 1(d) of the Building (Building Product Information Requirements) Regulations 2022.

Product/system

Name	Medium Temp Slider
-------------	--------------------

Description

Medium Temp Sliders are a commercial insulated sliding door primarily for use in temperature control applications for chillers. The doors are constructed from either EPS, PIR or XFLAM insulated panel, capped with aluminium extrusion. Silicone gaskets on the sliding door leaf seal against a door frame, which comes with a thermal breaker strip. Door frames can be 4 sided (full surround), or 3 sided with a wiper gasket on the bottom of the leaf to seal against the floor. The door leaves hang from nylon rollers that run along an aluminium track with rubber stops at each end. The track features drop down inserts so the door drops into place in the closed position for optimal sealing.

The insulated panel leaves have pre-painted colour steel skins, finished in Titaina. The aluminium extrusion parts are mill finish as standard, with powder coat finish optional. The leaf thickness can be 75mm, 100mm or 150mm. Alternative thickness panels can be used with a custom capping solution.

Medium Temp Sliders can optionally be fitted with kickplates and vision panels. Heated sills are also available. As standard the doors are fitted with a S/S lever handle and wall locking bracket, as well as internal safety release.

Further information on Medium Temp Sliders can be found at <https://www.acedoors.co.nz/insulated-sliding-doors/>.

Medium Temp Sliders are not fire rated.

Scope of use

Medium Temp Sliders are suitable for use in commercial chillers and cool rooms, and can also be used in other applications where a solid sliding door is required and temperature / air flow between 2 spaces is a consideration.

Also suitable for use where cleanliness and dust is a consideration and the doors are easily wiped down and have a clean finish.

Conditions of use

Medium Temp Sliders must be installed by an experienced installer, builder or insulated panel contractor.

Cannot be used in roofs or non-vertical walls, and cannot be used where there are fire rating requirements.

Medium Temp Sliders cannot be used for freezers, in that case a Low Temp Slider should be used.

Openings must be designed with the minimum requirements given on the Insulated Sliding Door Drawing documents.

Relevant building code clauses

B1 Structure — B1.3.1, B1.3.2, B1.3.3 (a, b, h, j), B1.3.4

B2 Durability — B2.3.1 (b, c)

E2 External moisture — E2.3.2, E2.3.7

F2 Hazardous building materials — F2.3.1

G7 Natural light — G7.3.1, G7.3.2

H1 Energy efficiency — H1.3.1 (a, b), H1.3.2E

Contributions to compliance

Structure

Medium Temp Sliders use robust construction and durable materials to minimise risk of collapse during construction, alteration, and throughout their lives. Likewise, the materials and construction used minimise deformations and vibrations that could cause discomfort or inconvenience to the building's occupants. Account has been taken for relevant physical conditions, including self-weight, imposed gravity loads and impact to ensure the doors can withstand these forces without being compromised.

Durability

Medium Temp Sliders have a durability of at least 15 years under normal use conditions, and when correctly maintained.

External Moisture

Medium Temp Sliders are fitted with either a bottom wiper gasket (3-sided frame), or a 4 sided, full surround frame to seal all around. It is recommended that a deflector or hood is installed over a Medium Temp Slider when used externally to reduce the amount of water running over the door.

Hazardous Building Materials

Medium Temp Sliders are safe when handled.

Natural Light

Medium Temp Sliders can be fitted with vision panels to allow natural light into the building.

Energy Efficiency

Medium Temp Sliders are designed to be made using standard insulated panels, which are used to build commercial freezers, cool rooms and chillers. As a result the doors are ideal for maintaining temperatures, providing excellent insulation properties.

Supporting documentation

The following additional documentation supports the above statements:
